

Tesla

Year Established: 2003

Founders: Martin Eberhard and Marc Tarpenning

CEO: Elon Musk

Headquarters: Texas, USA.

Business Description:

Tesla's mission is to accelerate the world's transition to sustainable energy. Tesla is building a world powered by solar energy, running on batteries and transported by electric vehicles. The energy generation and storage products work together with Tesla's electric vehicles to amplify its impact. Under the leadership of CEO Elon Musk, Tesla has achieved significant milestones through its integrated approach that combines advanced battery technology, autonomous driving capabilities, and a direct-to-consumer sales model.

Tesla's Ecosystem

Case Study:

Founded in February 1995, BYD is a high-tech company devoted to leveraging technological innovations for a better life. After more than 29 years of high-speed growth, BYD has established over 30 industrial parks across 6 continents and played a significant role in industries related to electronics, auto, renewable energy and rail transit. With a focus on energy acquisition, storage, and application, BYD offers comprehensive new energy solutions with zero-emission.

Question: Imagine you are responsible for designing a next-generation Tesla vehicle that directly competes with BYD, with a strong emphasis on environmental sustainability. What would your ideal future car look like?

What innovative features would you integrate, and what strategic approach would you take from design development to market launch?

Innovation Card - Tesla

Advanced Energy Technologies

Tesla's dedication to renewable energy is reflected in its diverse product lineup, including solar panels, the Tesla Solar Roof, and large-scale battery storage solutions like the Megapack. These innovations are designed to build a sustainable energy ecosystem that seamlessly integrates with electric vehicle technology. By reducing dependence on fossil fuels, providing backup power, and enhancing grid stability, Tesla's energy solutions demonstrate how a vertically integrated approach can effectively address both transportation and energy challenges.

Self-Driving Features and We, Robot

Tesla's focus on self-driving technology has led to major improvements in its Full Self-Driving (FSD) system. By using a large neural network trained on real-world data from millions of vehicles, Tesla constantly improves its self-driving software. While there are still legal and technical challenges, Tesla's progress in this area is key to its goal of fully autonomous transportation. The company's regular software updates and ongoing improvements show its commitment to advancing technology.

The future of autonomy and artificial intelligence will be realized through the creation of a fleet of autonomous vehicles and robots. Tesla is focusing on creating a sustainable future by producing a fleet of autonomous vehicles and robots with the Robotaxi, Robovan and Tesla Optimus.

Supercharging Network

One

of Tesla's most impactful innovations is its global Supercharger network. This extensive system allows Tesla owners to recharge quickly and easily, reducing range anxiety and making long trips more practical. Tesla continues to expand and upgrade the network, keeping it at the leading edge of EV charging technology. Additionally, features like vehicle-to-grid (V2G) capabilities and potential battery-swapping systems further improve the efficiency and convenience of Tesla's charging ecosystem.

Sophisticated and Ergonomic Car Designs

Tesla's design philosophy integrates cutting-edge technology with minimalist, ergonomic, and aesthetics. Its vehicles are built for both high performance and efficiency while prioritizing an exceptional user experience. This is reflected in features like intuitive touchscreen controls, spacious interiors made possible by optimized battery placement, and futuristic exteriors designed for maximum aerodynamic efficiency. By seamlessly combining style and functionality, Tesla has established its reputation as a leader in innovation and luxury in the EV market.

Netflix

NETFLIX

Year Established: 1997

Founders: Reed Hastings and Marc Randolph

CEO: Ted Sarandos and Greg Peters (Co-CEOs)

Headquarters: California, USA.

Business Description:

Netflix began as a DVD rental service and evolved into a global streaming powerhouse. Today, headquartered in Los Gatos, California, Netflix has transformed the way audiences consume entertainment. Its success is driven by a blend of cutting-edge technology, massive data analytics, and a relentless focus on original content. Netflix continuously invests in innovative content and advanced personalization to stay ahead of competitors such as Disney+, HBO Max, and Amazon Prime Video.

Case Study:

Netflix focuses on diverse storytelling, international productions, and interactive content. Its cutting-edge recommendation system and dynamic thumbnails enhance viewer engagement, while data-driven marketing drives global hype. Meanwhile, Disney+ leverages major franchises, HBO Max excels in prestige TV, and Amazon Prime Video capitalizes on sports and retail benefits, making the streaming competition more intense than ever.

Question: Camera, roll, action! As the film director at Netflix, please create an original series or film concept designed to achieve top ratings within a short time. What unique ideas, technologies, or marketing strategies would you use? How would you execute your vision to compete with rising streaming platforms?

Innovation Card - Netflix

Success Journey from Film Rental to Streaming Dominance

Netflix's transformation from a DVD rental service to a global streaming platform is a remarkable success story. Initially, it disrupted traditional rental models by delivering DVDs directly to consumers. Recognizing the digital shift, the company invested heavily in developing a streaming infrastructure that allowed instant access to films and TV shows. This strategic pivot not only revolutionized the entertainment industry but also paved the way for the era of on-demand content consumption. Today, Netflix's ability to adapt to technological changes is a key factor in its continued success.

Personalized Technology and Data Analytics

One of Netflix's most notable innovations is its personalized recommendation engine. Using advanced algorithms, Netflix analyzes viewing habits, search queries, and user interactions to curate content suggestions tailored to each subscriber. This high level of personalization enhances the user experience and boosts engagement by ensuring viewers receive content that aligns with their interests. By continuously improving its recommendation system, Netflix maintains a strong competitive advantage over other streaming platforms.

Innovative Original Film and Series Production

Netflix's expansion into original content production has redefined the entertainment landscape. The company has invested billions in producing a diverse slate of films and TV series that cater to global audiences. With groundbreaking projects like Stranger Things, Money Heist, Emily in Paris and Squid Game, Netflix has set new standards for storytelling and production quality. Its commitment to creative risk-taking has led to numerous critically acclaimed and commercially successful titles that not only attract new subscribers but also build a loyal fan base.

Social Media Marketing and Audience Engagement

Netflix is known for its innovative and highly engaging social media marketing strategies, leveraging platforms like Twitter, Instagram, and YouTube to generate buzz around new releases and interact directly with audiences. By using memes, interactive posts, and behind-the-scenes content, Netflix fosters a strong fan community and creates viral marketing moments that drive viewership. Its agile marketing approach, combined with data-driven insights, allows it to tailor campaigns to different regions and demographics, ensuring a broad and dynamic reach.

OpenAI

Year Established: 2015

Founders: Elon Musk, Sam Altman and others

Headquarters: San Francisco, USA.

Business Description:

OpenAI operates as a hybrid organization, combining non-profit research with for-profit ventures to sustain its operations and fund ambitious projects. Its business model revolves around creating advanced AI systems and offering them through APIs, subscriptions, and partnerships. Products like GPT-4, ChatGPT, and DALL·E have revolutionized industries such as content creation, customer service, education, and software development.

The company places immense value on ethical AI development, ensuring that its technologies are aligned with human values and do not cause harm. OpenAI's culture emphasizes collaboration, transparency, and long-term thinking, fostering an environment where researchers can push the boundaries of AI safely.

OpenAI generates revenue primarily through enterprise partnerships, licensing its models, and offering subscription-based services like ChatGPT Plus. Its products cater to developers, businesses, educators, and individual users, making AI tools accessible to a wide audience.

Case Study:

OpenAI has significantly influenced the global AI landscape. Its technologies are widely used for writing assistance, coding, research, education, automation, and creative work. ChatGPT accelerated the public adoption of generative AI and encouraged businesses worldwide to integrate AI into their operations.

Questions: How can OpenAI maintain its competitive advantage while addressing ethical and regulatory challenges in the rapidly evolving AI industry?

Innovation Card

OpenAI Pioneering the Future of Artificial Intelligence

OpenAI, founded in December 2015, has emerged as a frontrunner in the artificial intelligence (AI) landscape. With a mission to ensure that artificial general intelligence (AGI) benefits all of humanity, the company's growth reflects innovation, collaboration, and a commitment to ethical AI development. In its early years, OpenAI made significant advancements, including the launch of OpenAI Gym, a toolkit for developing and comparing reinforcement learning algorithms. This platform became a key resource for researchers and developers, providing a standardized environment for testing and benchmarking AI models.

Sora- A New Era of AI Video Generation

Sora AI is a Generative AI model developed by OpenAI that can create videos from text using a transformer-based approach like GPT. This technology enables

automatic video generation, extends existing video durations, and enhances text understanding with DALL-E 3's recaptioning technique. In business, Sora can enhance knowledge management by facilitating visual content creation for marketing, education, and training. Additionally, it has the potential to optimize decision-making through richer data visualization and support industries such as entertainment, game development, customer service, and product simulation.

However, Sora also faces challenges, including the risks of deepfakes, copyright issues, and the need for regulations to prevent misuse. Therefore, it is crucial to ensure that Sora's implementation in business and industry follows ethical and responsible practices. When used appropriately, Sora can be a revolutionary tool that drives innovation, efficiency, and quality improvements across various sectors.

First Collaboration in Southeast Asia

The super application company headquartered in Singapore, Grab, has announced that it will collaborate with OpenAI to develop artificial intelligence for Grab users, partners and employees. The initial collaboration took the form of implementing an initial test of ChatGPT Enterprise for Grab employees. Grab is using OpenAI's technology to improve its services in three ways. First, it will add voice and text features to make the app easier to use, especially for elderly and visually impaired users. Second, it will create AI-powered chatbots to help customers solve problems faster. Third, Grab will use AI to update GrabMaps more quickly, making navigation better for both riders and drivers.

The O3-Mini Model OpenAI

OpenAI is launching a new AI model for free, following its decision to speed up product releases in response to competition from Chinese rival DeepSeek. CEO Sam Altman responded to the challenge by promising to deliver better models and release products faster. As part of this plan, OpenAI introduced O3-mini, a less powerful version of the upcoming O3 model, on January 23, just days after DeepSeek unveiled R1.

Uniqlo

Year Established: 1984

Founder: Tadashi Yanai

Headquarters: Japan

Business Description:

UNIQLO is a casual wear designer, manufacturer and retailer from Japan. It has been a wholly owned subsidiary of Fast Retailing Co., Ltd (Ogori Shōji) since November 2005. Operating under the SPA (Specialty store retailer of Private label Apparel) model, Uniqlo controls every stage of production—from design and manufacturing to retail—ensuring strict quality control and adaptability to market trends.

As of 2024, Uniqlo has at least 3,600 stores worldwide. Not only has the brand been warmly received in Asian markets, but it has also gained popularity in America and Europe. In France, for example, the Uniqlo store located in the Opera district of Paris holds the record for the highest sales in Europe. With its 40th anniversary celebration centered in the fashion capital of the world; this marks a strong indication that Uniqlo is ready to dominate the global market.

Case Study:

In 2024, Uniqlo reported its third consecutive year of record earnings, with international revenues rising by 19% and a 4.7% increase in Japan. This success is driven by Uniqlo's focus on functional, high-quality basics rather than fleeting fashion trends. Signature product lines like HeatTech and AIRism highlight the company's dedication to innovative, performance-enhanced apparel.

However, Uniqlo's heavy reliance on synthetic fabrics like polyester raises environmental concerns. During washing, these materials shed microfibers that enter waterways, contributing to microplastic pollution and posing risks to marine ecosystems.

Question: If you were a Uniqlo executive team, how would you balance business growth and sustainability in the next five years? How can Uniqlo enhance product innovation to attract new customer segments without compromising quality?

Innovation Card

LifeWear Philosophy

This is LifeWear.

Uniqlo's LifeWear concept focuses on creating high-quality, functional clothing that meets the daily needs of consumers. This approach emphasizes simplicity, longevity, and versatility in design. The importance of bringing local nuances to Uniqlo is based on the principle that each region has its own culture, history, and lifestyle, and customers have their own preferences for a product. For example, during the current winter season in Osaka, customers will find a variety of Heat-Tech products in all stores, which means that both residents and tourists can stop by and easily find what they need. The same philosophy applies to product selection throughout the year.

HeatTech Technology

Developed in collaboration with Toray Industries, HeatTech fabric retains and generates warmth by absorbing moisture from the body. This innovation allows for lightweight clothing suitable for cold climates. Despite its benefits, HeatTech's reliance on synthetic fibers (polyester, acrylic, and rayon) raises concerns about microfiber pollution. Uniqlo

and Toray are exploring eco-friendly alternatives, such as recycled materials and biodegradable fabrics, to minimize environmental impact.

AIRism Fabric

Toray and Uniqlo have had a partnership for 20 years. The chemical industry company, headquartered in Tokyo, specializes in synthetic organic chemical technology, polymer chemistry, and biochemistry, and is known for its environmentally friendly production chain. The type of clothing material that was developed by Uniqlo in collaboration with Toray has resulted in a product called AIRism. Made from ultra-fine and lightweight fibers, AIRism quickly absorbs and dries sweat, making it comfortable to wear in hot

weather.

Collaborations with Designers

Uniqlo stays true to its brand promise of celebrating individual style by collaborating with renowned designers to create unique and accessible fashion. Although this brand communication channel was arguably made famous by competitor H&M, Uniqlo has proven that it started its own designer collaboration strategy since 2008 when it tapped designer Alexander Wang to create a five-piece dress collection. By collaborating with global designers, Uniqlo is also able to gain quicker access into markets where it has a weaker brand awareness, like the US and European markets. Uniqlo has also partnered with renowned designers like Clare Waight Keller and Jonathan Anderson to offer limited-

edition collections. These collaborations blend high-fashion aesthetics with Uniqlo's commitment to accessibility

RON88

Headquarters: Indonesia

Year Established:1993

Company Description:

RON88 is an Indonesian bottled water brand aiming to redefine how young consumers perceive hydration. In a highly competitive market dominated by established brands, RON88 seeks to position itself as more than just drinking water — but as a modern lifestyle brand connected to youth culture, digital trends, and everyday experiences.

The company focuses on premium quality hydration while building a strong emotional connection with Gen Z audiences through creative branding, social media engagement, and community-driven campaigns. As digital consumption rapidly grows in Indonesia, RON88 sees opportunities in TikTok marketing, influencer collaborations, and lifestyle positioning to strengthen its market presence.

Despite its potential, RON88 faces challenges in standing out among competitors with significantly larger marketing budgets and nationwide brand recognition.

Case Study:

Indonesia's Gen Z consumers spend hours daily consuming short-form content on platforms such as TikTok and Instagram Reels. Viral trends, aesthetic branding, and relatable storytelling increasingly influence purchasing decisions — even for everyday products like bottled water.

Competitors in the beverage industry aggressively invest in celebrity endorsements, large-scale advertising, sports sponsorships, and lifestyle campaigns to maintain visibility. Meanwhile, consumers are becoming more selective and emotionally driven when choosing brands, they want to support and share online.

RON88 wants to become:

“Indonesia's Most TikTok-Worthy Water Brand.”

The company plans to launch a large-scale digital campaign targeting Gen Z audiences aged 16–24 with limited marketing resources. However, the management team faces several challenges:

- limited marketing budget
- low national awareness
- lack of strong digital identity
- intense competition from larger brands

RON88 believes that with the right strategy, creativity can outperform the budget.

Question:

As the marketing strategy team of RON88, create a digital campaign using social media platforms such as TikTok and/or Instagram that can transform RON88 into a viral Gen Z lifestyle brand in Indonesia.

Innovation Card

Diverse Packaging Solutions

RON88 provides a wide range of packaging sizes designed to meet different consumer needs and lifestyles. Its product line includes cup packaging, bottles (240 ml, 380 ml, 500 ml, and 600 ml), larger family-size bottles (1,500 ml), and gallon packaging. This strategy allows consumers to choose packaging based on convenience, consumption patterns, and usage occasions, making RON88 accessible to both individual and household segments.

Strategic Brand Collaborations

RON88 strengthens its brand value through collaborations with globally recognized brands such as Disney, Justice League, Looney Tunes, Warner Bros., and other well-known franchises. These partnerships create limited-edition packaging and exclusive product experiences that increase consumer engagement while enhancing brand visibility and emotional connection with

customers.

Sustainable Glass Packaging Innovation

As part of its sustainability and environmental commitment, RON88 introduced premium glass bottle packaging to support a greener consumption approach and reduce dependence on single-use plastic. This innovation gained international recognition through the **Asia Packaging Award**. The glass bottle design features Indonesian batik motifs, representing local cultural identity while promoting environmental awareness and premium product positioning.

International Quality Recognition and Certifications

To strengthen customer trust and ensure consistent product quality, RON88 continuously participates in international certification programs. Since 2018, RON88 has received several prestigious recognitions, including:

- Gold Award from Monde Selection for product quality excellence
- Superior Taste Award from the International Taste & Quality Institute for taste quality and freshness
- The only mineral water brand certified as Hexagonal Crystal Water by Masaru Emoto in Tokyo, reflecting RON88's healthy water quality
- Superbrands recognition
- Brand Choice Award

These recognitions demonstrate RON88's commitment to delivering premium mineral water quality standards.

100% Natural Mountain Spring Transparency

RON88 emphasizes authenticity by sourcing its water from 100% natural mountain springs without drilling processes. To increase transparency and consumer confidence, RON88 includes information directly on product labels and provides a scannable barcode that allows customers to explore the exact location and condition of the natural spring source. This approach strengthens product credibility and supports informed consumer choices.
